

**GEOLOGY OF THE
APOLLO 14 LANDING SITE
IN THE FRA MAURO HIGHLANDS**

View east past Lunar Module toward Cone crater ridge. Umbrella-shaped object just beyond American flag is transmission antenna. Glow in upper right is the sun. (NASA photograph AS14-66-9304.)

ILLUSTRATIONS

[Plates are in pocket]

- FRONTISPIECE.** View of Cone crater ridge from near the Lunar Module.
- PLATE**
1. Geologic map and schematic section of the Apollo 14 landing site.
 2. Map showing traverse line, stations, features identified in station panoramas, and samples collected at the Apollo 14 landing site.
 - 3-6. Apollo 14 panoramas showing sample collection localities and features identified:
 3. (Panoramas 1-5, 15) from the lunar module windows and near the lunar module.
 4. (Panoramas 6-8) at stations A, B, and B1, and shaded relief maps of stations A and B.
 5. (Panoramas 9-11) at stations B2, B3, and C', and shaded relief maps of stations B3 and C'.
 6. (Panoramas 12-14) at stations F, G, and H and shaded relief maps of stations G, G1, and H.
 7. Map showing boulder density and distribution of rock particles at the Apollo 14 landing site.

| 72. | Orthogonal photographs of sample 14312, shown in approximate lunar orientation | 85 |
| 73. | Orthogonal photographs of sample 14319, shown in approximate lunar orientation | 86 |
| 74. | Photograph of samples 14315, 14318, 14320?, and one unidentified sample from the North Boulder Field cluster, station H | 87 |
| 75. | Orthogonal photographs of sample 14315, shown in approximate lunar orientation | 88 |
| 76. | Orthogonal photographs of sample 14318, shown in approximate lunar orientation | 89 |
| 77. | Photograph of sample 14321 and vicinity at station C1, and part of the blocky rim of Cone crater | 90 |
| 78. | Orthogonal photographs of sample 14321, shown in approximate lunar orientation | 91 |
| 79. | Diagram showing geometry of a tilted Lunar Orbiter photograph | 97 |

 TABLES

| | Page |
|---|------|
| TABLE 1. Numbers of craters counted in each area, numbers of craters calculated per 10^6 km ² , and crater ratios between Fra Mauro Formation and adjacent Mare surfaces in outer ring of Sinus Aestuum | 13 |
| 2. Albedo and polarimetric measurements from the Apollo 14, 11, and 12 sites and from the Surveyors 3, 5, 6 and 7 sites | 22 |
| 3. Summary of photogeologic rock-type characteristics | 42 |
| 4. Sample locations and page references by sequential LRL number | 49 |
| 5. Cross-reference of lunar samples with locations, lunar-surface photographs, status of determining sample location and orientation, megascopic sample description, and comments by the astronaut crew during sample collection | 50 |
| 6. Usage of film on the lunar surface during the Apollo 14 mission | 65 |
| 7. Sequential listing within each magazine of 60 mm Apollo 14 lunar surface pictures | 92 |
| 8. Chronological listing of 60 mm Apollo 14 lunar surface pictures | 94 |
| 9. Apollo 14 lunar surface 70 mm film usage by camera number | 96 |
| 10. Elevations of points identified on plates 3 through 6 which are correlated with points on plate 2 | 98 |
| 11. Elevation of camera at panorama stations | 99 |
